

October 12, 2015, Building Room
Outputs from Singapore meeting

Genting, Singapore
Leif Granholm
Leif.granholm@tekla.com

Output targets from the Technical Room

- **Discussion about the Scope of Technical room and the future Technical Executive Committee**
- **Decided to focus in the first stage on the functions to be fulfilled. Identified 4 of these functions :**
 1. Short term Maintenance and support of existing standards. We consider that bSI needs to provide proper maintenance for it's standards in order for these standards to be widely used by the industry
 2. Long term Maintenance (more like a roadmapping exercise about future versions of the standards) in order to adapt these to business opportunities
 3. Then we need to prepare the future and have a forward thinking exercise about Innovation and new ideas. These new ideas, hosted by the technical room at the beginning, can then be spinned-off to specific rooms/groups we they mature.

Output targets from the Technical Room

4. A more efficient technical guidance with a holistic consideration of technical issues:

This means identifying the big picture (who is doing what in various group and rooms) and underlining collaboration opportunities or even redundancies and finally providing the Standards Committee with solutions to avoid these.

This is the current situation and we'll discuss later about organizational matters.

Linked data

- **Linked data WG in formation meeting**
 - Activity history presented
 - Proposal to bS presented and discussed
 - Agreement to put proposal to form official working Group to SC
- **Joint meeting with Product Room**
 - Linked data concept presented by Jacob
 - Discussion of what Linked Data means for bSDD
- **Presentation of Linked data in IDBE meeting as part of Leif:s position statement**

Technical RoadMap

- **Description of where we are**
 - Activity history and presentation of TR on bS web site
 - Needs plenty of work, explanations and expansion
- **Discussion of relation to ISO TF02**
 - Agreement that bS needs to be actively present at TF02
- **bS needs to call its “roadmap” something else, not yet decided what.**
- **Noted importance of taking into account users needs (use cases) as a driver of the technical roadmap**
